

If not you, then who?

# Cleaning Our Oceans Coloring Page

Did you know that.....?

1. Over 20,000 species of animals live in our oceans. That's 3.5 million fish!
2. A system of currents flows through every ocean in the world and connects them together like an underwater highway. Fish aren't the only travelers on these highways - litter can cruise on them too!
3. 14 billion pounds of trash are dumped into oceans every year.

After trash enters the ocean it washes up on shore or travels along the currents. If the trash travels far enough, it will reach the Great Pacific Garbage Patch. Most of this trash is plastic waste like bottles and bags.
